Frontend developer

We are looking for an experienced front-end engineer to help us build the best gaming platform for eSports fans and players.

We appreciate engineers who express themselves deeply and speak clearly. Working on early-stage products excites you and you love collaborating with the product team to find the best solutions for the product. You understand that this is a team sport and that we can only win together. If you are passionate about gaming, eSports and working with the latest web technologies, you will have a blast working with us.

What we expect:

- Available during European business hours
- You are up-to-date with the latest front end development trends
- You have at least two (2) years of production-level experience with **Angular 2+**
- **TypeScript experience**, or **strong JavaScript experience** with the willingness to learn
- Basic skills with UNIX command line: macOS or Linux
- An eye for design and a mind for UX
- Experience with common front-end development tools such as CSS, Webpack, Yarn, etc.
- Strong understanding of REST APIs and knowledge of how to interface with them.
- Experience working with others on Github with branches and pull request workflow
- Experience with remote work and teams, self-driven and able to work independently
- English communication skills
- If you play competitive video games, like DOTA or PUBG, it is a big plus

You will be:

- Shipping features on a daily level
- Planning and collaborating on features with product managers, designer and engineers

Eventually, we'd love to see most of the skill set described. However, we would always prefer an individual who lacks some experience in the stack but has a proven record in other stacks and passion for programming and solving interesting problems.

DON'T FORGET TO INCLUDE THESE IN YOUR APPLICATION :
- Link to your Github and Stackoverflow account
- CV and LinkedIn with links to projects
- Tell us what excites you the most about this role in a few sentences
